

Ledgible makes crypto, legible. The Ledgible Platform was built from the ground up to streamline cryptocurrency and digital asset accounting operations for enterprises and institutions. With Ledgible Tax Information Reporting, Ledgible enables legacy and existing TIR systems to be able to handle cryptocurrency data. Through on-chain nodes, proprietary tax algorithms, and robust data mapping, all in a SOC 1 & 2 Type 2 audited solution, Ledgible is the choice of institutions, enterprises, and financial leaders looking for a solution in post-trade crypto tax & accounting data normalization.

Accessible

Ledgible connects and aggregates crypto data from exchanges, ledgers, wallets, & platforms.

Normalized

Crypto data is compiled and standardized, making it accessible for a wide variety of use cases.

Ledgible

Data is made legible and readable to existing accounting systems, solving the crypto data problem.

Tax Information Reporting Features

AICPA SOC 1 & 2 Audited Software

Ensures verification of internal controls endorsing industry-leading data security

Data at Scale

Easily sort and map necessary crypto data to tax payers information for form generation

Robust Data Aggregation

Take the headache out of aggregating and normalizing crypto data for 1099 generation

Automated 1099 Data Feed

Ledgible's platform allows users to get an automated stream of 1099 data, organized as needed.
